

It only takes an
INSTANT
to go DR

DX-D 40 digital detector with Automatic Exposure Detection

Your new DR solution **UP-AND-RUNNING** in an instant!

Don't wait for DR quality

With the DX-D 40 digital detector, your direct radiography (DR) solution will be up and running in no time! Easy and fast installation means you get the benefits of DR, in an instant. The new Automatic Exposure Detection (AED) eliminates the need for an electrical connection to the X-ray system, so you can use it seamlessly with virtually any X-ray system, right away. You can maximize your existing investments, while opening up new possibilities and perspectives, with a cost-effective solution that helps you meet your goals.

Ultra-convenient DR

In its minimal configuration, the DX-D 40 instant DR solution delivers ultra-mobility: the use of AED technology and standard wireless communication can reduce the configuration to a DR detector and a laptop. You have cable-free, wireless and fully DR image acquisition instantly combined with an

existing or new X-ray source. Both laptop and detector are battery-powered, so they don't require a power outlet. With this platform your mobile analog radiography systems can be upgraded or retrofitted to ultra-convenient DR in a snap – without replacing your existing equipment.

It even allows sharing of the DR imaging system with multiple X-ray systems.

GOS or CsI detector: you decide!

The DX-D 40 is all about versatility: you decide which wireless detector – Cesium Iodide (CsI) or Gadolinium Oxy-Sulphide (GOS) – best meets your exam and budget requirements. Both detectors give you exquisite image quality with our industry leading MUSICA Image Processing, and CsI detectors offer the potential for radiation dose reduction up to 50% depending on conditions*, a benefit for radiation-sensitive patients.

Gain a **NEW PERSPECTIVE** on your imaging facility

A smooth operator

The new AED panel, the image acquisition workstation, the MUSICA image processing software – all come together to create a smoother workflow and simple connectivity. Functionalities like AED, an intuitive user interface offering access to a host of tools, and intelligent digital X-ray image processing help you enhance productivity and ease of use. There's no time lost in post-processing, or in connecting to the RIS, PACS or HIS.

And a cassette-less DR solution means lots of productivity and workflow benefits, like much faster imaging cycle times ... immediate verification of patient positioning and image quality ...

immediate transfer of images to the PACS ... less risk of misidentification of images ... and more. The detector, which fits into any standard bucky tray, can be easily removed for versatility in all exams, patients and applications.

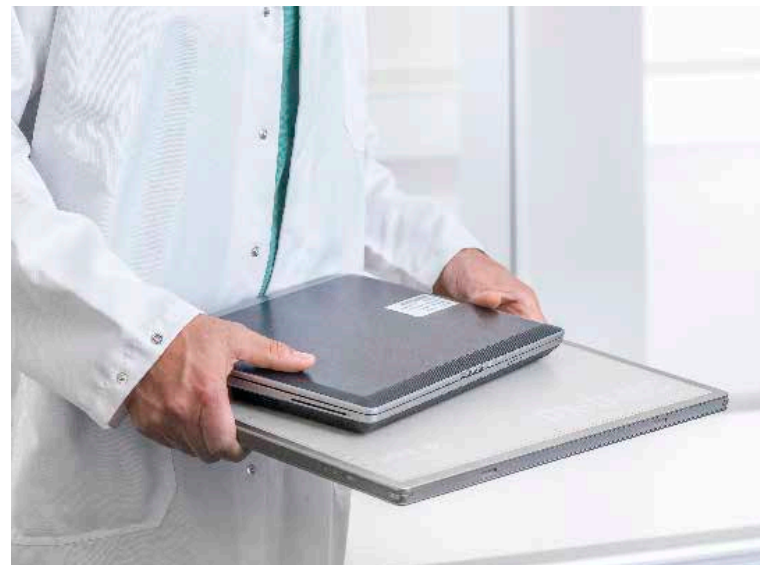

Don't compromise – optimize!

The DX-D 40 digital detector comes with our automatic, intelligent, body part-independent MUSICA image processing software, specially adapted and tuned to enhance DR image quality. MUSICA analyzes image data for bones and soft tissue separately, showing greater detail and allowing you to extract diagnostic information quickly, without any time consuming manual image adjustment.

* Testing with board certified radiologists has determined that Cesium Bromide (CR) and Cesium Iodide (DR) detectors when used with MUSICA processing can provide dose reductions of between 50 to 60% when compared to traditional Barium Fluoro Bromide CR systems. Contact Agfa HealthCare for more details.

INSTANT DR? YES!

- Add a new X-ray unit or retrofit an old one: cost-effectively, easily and quickly.
- All you need is a dedicated workstation or laptop and the DX-D 40 digital detector.
- New Automatic Exposure Detection (AED) offers auto-trigger functionality; the detector is ready to capture an exposure with no generator connection.
- It's wireless, cable-free and battery-operated: ultra-mobile, instantly!

First class service

Enjoy peace of mind, with Agfa HealthCare's first class service support. Service agreements are available for simple phone and part support through advanced level agreements making lifecycle costs predictable. Our Damage Assistance Program (DAsP) for portable DR detectors covers accidental drops, bashes, hits, etc. including liquid damage. You can rely on our worldwide team of over 1,000 service professionals and authorized dealers to keep your new Instant DR running just as hard as you do!

Insight. Delivered.

Agfa HealthCare is a global leader in the fast growing market of integrated IT and imaging systems, offering healthcare facilities a seamless flow of information and a 360° view of patient care. The company has a unique, holistic approach, enabling it to provide in-depth clinical know-how and fully integrated hospital-wide solutions. These specialized solutions integrate IT and imaging systems for Radiology, Cardiology, Mammography and Orthopaedics. Agfa HealthCare's Services offers additional services to ensure the reliability and functionality of Agfa HealthCare's Direct Radiography solutions – providing peace of mind for radiologists, their staff and their patients. ■
